

Coating for medical technology

M-Line ultra+ PA

Biocompatibility, sterilizability and abrasion resistance are surface characteristics which are the prerequisite for use in medical technology.

With our biocompatible coating **M-Line ultra+ PA** we offer you all these properties in one surface.

Additionally our surface has an insulating effect which often is important for minimally invasive surgery.

Disturbing reflections of instrument surfaces commonly are causing problems too.

Our coating **M-Line ultra+ PA** in colour black is matt and solves this problem as well.

Mechanical follow-up treatment of the surface (for fits etc.) is possible without losing her properties.

M-Line ultra+ PA is compliant according to ISO 10993 and provides you security whether you are user or patient.

M-Line ultra+ PA biocompatible

M-Line ultra+ PA high chemical resistance up to approx. 100°C

M-Line ultra+ PA can be mechanical machined

M-Line ultra+ PA sterilizable

M-Line ultra+ PA impact-proof and shockproof

M-Line ultra+ PA insulating
